

KUSH SAINI

Delhi, India | P: 8527515421 | kushsaini1212@gmail.com | www.linkedin.com/in/kush-sainii/ [Github](#)

EDUCATION

Vellore Institute of Technology

Bachelor of Technology

Computer Science and Engineering

CGPA:8.77

SKILLS

Technical Skills: Java, Spring Boot, Python, React

Databases: MySQL

Tools: Figma, IntelliJ IDEA, VSCode, Postman

Cloud: Microsoft Azure

PROJECTS

QUERY-CRAFT AI: SQL HELPER APPLICATION – *Spring Boot, Java, Google Gemini AI, Maven, JDBC* Nov 2025

- Innovated an AI-powered natural language query processor that converts plain English commands into executable SQL using Google Gemini 2.5 Flash API, enabling non-technical users to interact with databases without SQL knowledge.
- Engineered a dynamic multi-database connection system with parameterized JDBC URL construction and automated schema introspection; designed a 5-step orchestration pipeline with type-specific result formatting.
- Architected an enterprise RESTful API layer using a 4-tier service architecture, including global exception handling, health-monitoring endpoints, and dual result mapping for optimized multi-source database interactions.

SYSTEM MONITORING WEB APPLICATION – *Spring Boot, Java, React, REST APIs, Maven* June 2025

- Created a full-stack web application enabling remote system monitoring and command execution through a real-time browser interface, featuring a responsive React frontend and a Spring Boot backend exposing 2 RESTful APIs for 5+ system metrics (CPU, memory, disk, network, uptime) collected via the OSHI library with sub-second latency.
- Engineered a secure command execution service with intelligent whitelist-based validation restricting operations to 4 pre-approved commands, and designed the application for remote accessibility using ngrok tunneling, enabling users to monitor and control systems from anywhere with <200 ms latency.
- Structured the project with a modular, Maven-based architecture across 3+ services, applying clean code practices to improve maintainability.

PARKING MANAGEMENT SYSTEM API – *Spring Boot, Java, PostgreSQL, JPA/Hibernate, Swagger, Maven* July 2025

- Developed a RESTful parking-management API with a structured data model handling vehicles, entry/exit timestamps, duration, and billing using UUID-based identification.
- Implemented full CRUD operations using JPA/Hibernate with Spring transaction management to ensure reliable database operations.
- Applied the DTO pattern with ModelMapper for clean layer communication and integrated Swagger for interactive API documentation.

ACTIVITIES & ACHIEVEMENTS

Managed the student verification process for 2000+ students across various college clubs as an ECA member.

Achieved 1st rank in Class 12 with a 95% aggregate, graduating as the batch topper.

CERTIFICATIONS & COURSES

Completed the Microsoft Azure Fundamentals (AZ-900) certification

Completed "Building Applications with Spring Boot and MVC Architecture" course authorized by Board Infinity
